

### Optimizer Outlook POSITIVE VALUES

- You probably love to figure things out and are often inclined to invent and design productive solutions. Problems aren't really problems for you but more of an opportunity to have some fun looking for possible solutions.
- Your natural tendencies often lead you to activities that include devising practical solutions to real-world problems. You may even reinvent or reorganize something to make it work better.
- While others are easily frustrated by problems, you actually have a lot of fun figuring things out and discovering approaches that others haven't thought of yet.
- You probably get a lot of satisfaction from making things work better, breaking through barriers, discovering new ways, and charting new courses.
- In both personal and professional circles, you're the inventive fixer who helps remove obstacles that keep others from accomplishing their goals.

### Optimizer Outlook CHALLENGING TRAITS

- Repetitious tasks won't hold your interest for very long unless you're given the chance to invent something new or figure out ways to make things work better.
- Sometimes you may wander off path with your thinking, often getting overly involved in the details of a problem as you sort through all the variables in your mind.
- When you're discussing a problem or a possible solution, others might think you go off on rabbit trails of thought and take too long to get to the point.
- Depending on your comfort level with a group, you might jump into fixing a problem too quickly. Others might feel a little intimidated and not readily contribute their ideas unless you specifically ask them to share their perspective.
- Once assigned responsibility for finding a solution, you like to take charge and aren't shy about directing others in the process of making things work better. Others may have warned you to be careful not to micromanage, and to value the input of others. At times you may find it hard to accept that other people may solve the same problem in a different way.
